

I am the board Chair of the Center for Transportation and the Environment www.CTE.TV

We are a non-profit organization helping the private and public sectors develop clean transportation throughout the United States, with offices and operations in Atlanta, Minneapolis, Berkeley and Los Angeles.

I am writing in firm support of the Governor's draft bill. Hydrogen is the fuel we need to mitigate carbon emissions. New Mexico has an abundance of sunlight and open space available to create hydrogen through direct conversion of methane or through the electrolysis of water.

As much as I love Maine, I think New Mexico is a superior location for production of Hydrogen. I also believe that there will be strong demand for hydrogen as both a storage and transport medium.

If there are ways that we at CTE can be helpful in your efforts, we will be eager to do so.
